Digital Literacy Project Report

Course code-CSE0001

Enhancing Awareness and Practical Skills for Effective Digital Participation

SUBMITTED BY: KARTAVYA

REG. NO.: 25BAI11518

[Computer science with AL and ML]

Date : 27 March 2026

INTRODUCTION

Digital literacy has become an essential skill in today's technology-driven world. It involves the ability to effectively use digital tools, platforms, and communication methods in a responsible and productive manner. As students entering a highly digital academic and professional environment, understanding digital literacy is crucial for success.

This project was undertaken as part of the CSE0001 Digital Literacy course to develop both awareness and practical skills related to digital tools and online behavior. The objective of this project is to explore key aspects of digital literacy through five structured tasks, including creating an awareness infographic, building a professional digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and analyzing cybercrime with preventive measures.

Each task focuses on a specific dimension of digital engagement, helping students become responsible digital citizens. Through this project, practical exposure to tools like GitHub, Canva, coding platforms, and professional communication methods has been achieved.

Overall, this report documents the learning outcomes, activities performed, and insights gained during the completion of all five tasks.

Task-1

I created my infographic using Canva, an easy-to-use online design tool that offers a variety of templates, icons, and customization options. Canva helped me quickly organize my ideas into a visually appealing format without needing advanced design skills.

My design focuses on explaining the concept of digital literacy for students. It highlights key areas such as what digital literacy means, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I used different colors, icons, and sections to make each topic clear and engaging. The layout is simple and structured so that viewers can easily understand the information at a glance.

One thing I found interesting while making this infographic was how design choices like colors, icons, and spacing can make information more effective and attractive. However, I also found it slightly difficult to balance the amount of content and keep the slide clean without overcrowding it. Overall, this activity helped me understand both digital literacy concepts and basic design principles.

Task 2

I created and updated my profiles on GitHub, LinkedIn, and Kaggle as part of this task. Each of these platforms serves a different but important purpose in my academic and professional growth.

GitHub is widely used for version control and sharing code. I plan to use it to upload my projects, collaborate with others, and build a strong coding portfolio over the next four years. LinkedIn is a professional networking platform where I can connect with peers, seniors, and industry professionals. I will use it to showcase my achievements, internships, and skills while exploring career opportunities. Kaggle is focused on data science and machine learning, offering datasets, competitions, and notebooks. Since I am pursuing AI and ML, I plan to actively participate in Kaggle competitions, practice with real-world datasets, and improve my problem-solving skills.

Over the next four years, I aim to consistently update these platforms, learn from the community, and build a strong online presence that reflects my skills and growth.

-

Task 3

To create the Digital Literacy Awareness Quiz, I used Google Forms as the primary platform. It is a simple and effective tool that allows users to design surveys and quizzes easily. I built a quiz consisting of multiple choice and short answer questions focused on topics like online safety, strong passwords, and cyberbullying. I also practised enabling quiz settings, assigning correct answers, and adding points for automatic grading.

Through this activity, I learned how to organize questions clearly and make the form interactive and user-friendly. I also understood how digital tools can be used for assessment and knowledge sharing in an efficient way. Google Forms helped me improve my skills in creating structured content and managing responses digitally.

These tools will be very helpful academically, as I can use them for conducting quizzes, collecting feedback, and completing group projects. It will also save time in checking answers and analyzing results. Overall, this experience improved my digital literacy and showed me the importance of using technology effectively in education.

Task 4

Poor digital communication can lead to serious misunderstandings, especially in academic or professional settings. For example, in a group project, one student misunderstood a short and unclear message about the submission deadline and ended up submitting their part late. This affected the entire team's performance and resulted in lower marks. The issue occurred because the message lacked clarity and there was no confirmation from team members.

This situation could have been avoided with better communication practices. The sender should have provided clear and detailed instructions, including the exact deadline and expectations. Additionally, using tools like shared documents or group meetings could have ensured everyone understood their responsibilities. Effective digital communication requires clarity, proper tools, and confirmation to prevent such problems.

Task 5

While researching online safety, what surprised me most was how easily people fall victim to simple scams like phishing messages and fake UPI requests. I realized that many frauds don’t require advanced hacking—just basic tricks that exploit carelessness or lack of awareness. The fact that even educated college students can lose money by sharing an OTP or approving a payment request was quite alarming.

One habit I will personally change is being more cautious with links and payment requests. Earlier, I would sometimes click on links without verifying their source or quickly approve UPI notifications. Now, I will double-check every request and avoid rushing through financial transactions. I will also ensure that I never share sensitive information like OTPs or PINs with anyone, no matter how genuine they seem.

CONCLUSION

This Digital Literacy project provided a comprehensive understanding of essential digital skills required in academic and professional environments. Through the completion of all five tasks, I gained practical experience in creating digital content, managing online profiles, using coding and collaboration platforms, writing professional emails, and understanding cybercrime risks.

The project helped improve my ability to communicate effectively in digital spaces and enhanced my awareness of responsible online behavior. It also introduced me to important tools and platforms that will be useful throughout my academic journey and future career.

In conclusion, this project has strengthened my digital competence and prepared me to actively participate in the modern digital world with confidence, professionalism, and awareness.
